SECUR-SERV

Microsoft vs. You: Who Owns Security in Microsoft 365

What Microsoft Covers

- Uptime and service availability
- Basic email and identity protection
- Built-in threat detection and alerts
- Short-term file versioning and recovery
- Infrastructure security

Your Responsibility

- Long-term backup and recovery of files, emails, and Teams data
- Protecting against AI data overexposure and oversharing
- Classifying and controlling sensitive data
- Training employees to spot phishing and avoid risky clicks
- Proving compliance and audit readiness

Why It Matters

Microsoft ensures the platform is running and secure. But your data, your compliance, and your people are on you. Without additional safeguards, your business is at risk of:

- Lost or unrecoverable files
- AI exposing sensitive information
- Compliance failures
- Employee mistakes leading to breaches

With Secur-Serv, you can:

- Close the gaps Microsoft doesn't cover with third-party backup, monitoring, and controls
- Reduce human risk with engaging awareness training
- Protect sensitive data with classification, access management, and compliance support
- Stay resilient against downtime and breaches with a layered security approach
